

Integrated Learning Time

What is Integrated Learning Time?

Integrated Learning Time is two blocks of 60 minutes or one block of 120 minutes per 10-day cycle (included in the provincial *Time to Learn*). The purpose of this learning block is to:

- allow for student-centered learning and collaboration
- facilitate students' essential [competencies](#) and [skill development](#) within the renewed curricula
- provide time for inquiry-based learning projects
- strengthen student engagement in their learning

What does Integrated Learning Time look like? Sound like? Feel like?

- Teachers should act as facilitators of student learning i.e. circulating, supporting, providing direction.
- Students are engaged and active in the learning process.
- Students are formulating questions, investigating answers, building new understandings, communicating their learning to others.
- Students are developing critical thinking, collaboration, communication, reasoning and synthesis skills.
- Essential questions and inquiry based learning are key components.
- Students have entry points into the learning process tailored to their individual strengths and needs (Universal Design for Learning)
- Students could be working on individual work, collaborative work, single subject projects or cross-curricular projects.
- Learning experiences should be directly linked to curriculum outcomes.

What are the expectations for assessment, evaluation and reporting?

- Teachers assigned to the integrated learning time will collect assessment evidence depending on the outcomes targeted for instruction (this will vary depending on the learning experiences, essential questions and/or identified curriculum outcomes/subject(s))
- Assessment evidence, including conversations, observations and products, will be aligned with curriculum outcomes and focused on skills and competencies within all subjects areas

What does the Learning Environment look like?

- Learning norms should be established (for ex: creating culture within the classroom, appropriate use of space, learning expectations, etc)
- Students are doing multiple things at once, the learning is fluid and the work is purposeful.
- Student voices should be heard and demonstrate a feeling of productivity.
- Students should be able to answer questions relevant to their learning.
- Students can work alone, with a partner, in a small group, or a large group.
- Supportive resources should be available and accessible to students, including appropriate technology, print resources and other necessary supplies.
- Where possible, flexible seating/standing arrangements are available for use.
- Integrated Learning Time can happen in various spaces such as:
 - Cafeteria
 - Typical classroom
 - Outside
 - Atypical classroom (such as a lab or gymnasium)

- Hallway
- Other school spaces

What are the considerations for scheduling?

- Scheduling structures may be:
 - All school doing integrated learning time at the same time
 - Grade levels doing integrated learning time at the same time
 - FI may be scheduled at a different time
- Specific teachers will become responsible for any given integrated learning time, however collaboration among various teachers is necessary for students' effective use of *Time to Learn*.
- Administrators will create an internal schedule/school plan for Integrated Learning Time
- Teachers need time to plan effectively for this block - this is a shared responsibility amongst a group of teachers

How can you build in teacher collaboration time?

- There will be time built in for collaboration among the teachers who are scheduled to teach the integrated learning time (this will be over the 12.5% prep time). For example, if you are scheduled to teach the first one-hour or two-hour block of integrated learning time, you may have collaboration time the following one-hour or two-hour block (built within the next 5 or 10 days).
- The schedule will alternate to support shared teaching responsibilities.

Notes:

- French Immersion students will have the majority of their integrated learning time in French.
- Program staff will develop a plan for September and share with schools.
